DETAILED ACTION

Drawings

1. Figures 1-3 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

2. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they include the following reference sign(s) not mentioned in the description: item numbers 502 and 504. A proposed drawing correction, corrected drawings, or amendment to the specification to add the reference sign(s) in the description, are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

3. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, a peak signal [claims 1-2] must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Specification

4. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1-2 are rejected under 35 U.S.C. 102(b) as being anticipated by Hancock (5867021).

Regarding claim 1, Hancock discloses a peak detector [see Fig 8] comprising an input circuit (magnetically sensitive component 28) to input an input signal (S), a track and hold circuit (hold circuitry 110) to hold the input signal (S) and to output a peak signal [not shown in Fig], a comparator (U2 or U3) to compare the input signal (S) and the peak signal to generate a clock signal (represented as output signal line 140) and the track and hold circuit (110) to output the peak signal [not shown in Fig.] in accordance with the clock signal (140) [see column 10 line 23-column 12 line 42].

Regarding claim 2, Hancock discloses the peak detector [see Fig. 8] includes a capacitor (C1) to hold the peak signal [see column 10 lines 35-37].

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Evans (4295099), Vokac et al (4613974), Vig et al (5442283) and Ono et al (5589778) disclose a method and apparatus for determining signals via a peak detector.
